**Subject:** RE: San Jacinto Flows  
**Attachments:** SJ\_near\_real-time\_data\_plots.pdf

Thanks for getting back to me Valmichael. As requested in your calls yesterday, the attached shows the precipitation, flows, and stage heights in the San Jacinto River from May 12 – May 18. There has been increased flows and stage heights associated with the rain events on May 12<sup>th</sup> and May 13<sup>th</sup>, but the flows are well below a 10 year return interval storm. One of our Houston Staff made a visual inspection this morning and everything looked fine. I will send a follow up email with photos from his inspection later today or tomorrow morning. In the interim, please don't hesitate to contact me if needed. Please confirm that you received this email.

Thank you,  
David

**Subject:** RE: San Jacinto Flows

Folks – We were apparently having some email issues yesterday when I sent the email below and I need to verify you received the email and its attachment.

Gary and Valmichael – Can you please confirm

Thank you,  
David

**Subject:** San Jacinto Flows

Gary and Valmichael – As requested in your calls earlier today, the attached shows the precipitation, flows, and stage heights in the San Jacinto River from May 12 – May 18. There has been increased flows and stage heights associated with the rain events on May 12<sup>th</sup> and May 13<sup>th</sup>, but the flows are well below a 10 year return internal storm. I'll have one of our Houston Staff go out and make a visual inspection to make sure everything looks okay on the cap in the next day or two and will report back to you on that. In the interim, please don't hesitate to contact me if needed.

Thank you,  
David
